

ENERGY SECTOR MAINTENANCE OPERATIONS

One of the world's leading producers of crude oil engaged Trident to assess the efficiency of operations within its Maintenance Services group.

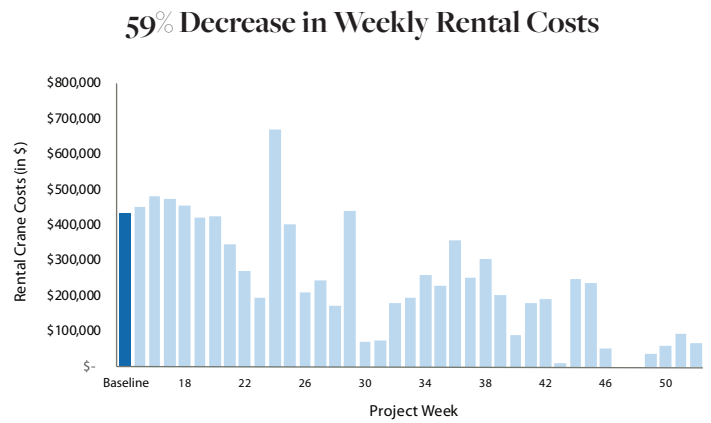

\$25MM
ANNUALIZED SAVINGS

HOW WE MADE IT HAPPEN:

- Enforced a crane shop cancellation and confirmation process, leading to a 59% reduction in rental crane costs:
 - Freed up company-owned resources to reduce unnecessary rental crane bookings
 - Reported out on reservations that were not utilized for each maintenance area
 - Promoted active communication between crane shop and users
- Improved contractor short interval management by frontline supervisors, leading to a 18% reduction in contractor FTE:
 - Reported out on planned vs. unplanned permits to reduce contractor time spent on permit request
 - Standardized duration and timing for contractor breaks to avoid unnecessary travel time
- Improved reporting and management systems:
 - Installed area and team dashboards
 - Upgraded Daily Activity Sheet to track barriers
 - Implemented weekly executive level reports to increase operational performance visibility

RESULTS:

A sustainability audit was conducted 6 months after the engagement closure, confirmed that the project exceeded the savings target of \$8MM to \$16MM, for a 1920% ROI, and installed a durable continuous improvement mindset across the organization.
